[MASTER THESIS]

[Thesis title: short and specific, ideally no longer than two lines]

[Start with the bigger picture in two or three sentences: what is the problem, and why does it matter, for example for energy storage, carbon capture or the energy transition? Write for students who are not yet experts in the field.]

[Then describe what the student will actually do in this thesis: which system is studied, which methods are used, for example molecular dynamics, density functional theory or machine learning, and what question the thesis should answer. Mention what is provided, such as code, data or computing time on the cluster.]

> **[Bonus:]** [Optional. For example: if the results are good, they can become part of a scientific publication, with you as a co-author.]

What you will do

- **[Keyword:]** [One sentence on a task, for example setting up and running simulations.]
- **[Keyword:]** [One sentence on a task, for example analysing the results with Python.]
- **[Keyword:]** [One sentence on the supervision, for example weekly meetings.]

Your profile

- **[Background:]** [Study programme, for example physics, chemistry or engineering.]
- **[Skills:]** [Required or helpful skills, for example basic programming in Python.]
- **[Motivation:]** [What matters most, for example curiosity and working independently.]

Interested?

[Send a short email with your CV and transcript to the supervisor. We are happy to discuss the topic and adapt it to your interests.]

Supervisor
[Name Surname]
[Position], University of Stavanger
name.surname@uis.no

Co-supervisor
[Name Surname]
[Position], [Institution]
name.surname@uis.no

Thesis type
[Master thesis, 30 ECTS]

Start
[Spring 2027 or by agreement]
